

2020

CYBERSECURITY TRAINING

Through engaging video-based case studies, employees will learn how to protect Personally Identifiable Information (PII), what real-life threats are targeting them, and best practices for avoiding mistakes that could lead to detrimental consequences for their organization.

Topics Covered

PII

Employees will learn what PII and sensitive company data are, where they are located, and how they can do their part in helping protect it.

Cybercrime Target

We cover who cybercriminals are targeting, focusing on the theme that all businesses are a target. In addition, we discuss what causes the majority of data breaches.

Threats

We take an in-depth look at some of the top threats to organizations, including phishing, password reuse, Business Email Compromise (BEC) scams, Dark Web dangers, ransomware, and more!

Breach Response

Employees will take a look at what to do if they suspect a data breach and learn about policies & procedures.

Reduce human vulnerabilities through a robust security awareness program

Employee Certification

Following the online training course, employees will put their knowledge to the test with a 20-question quiz. A passing quiz score (80% or higher) will provide the employee with a certificate of completion. Our documentation portal houses all of your organization's training records and certificates for simplified tracking and quick reference.

Ongoing Cybersecurity Training Available

Unfortunately, cybercriminals never stop advancing their tactics, meaning staying up-to-date on current threats and best practices is critical. Our ongoing cybersecurity training program makes training continuous and combats the top human vulnerabilities facing your organization with weekly videos, in-email phishing training, simulated phishing tests, dark web monitoring, an Employee Vulnerability Assessment, and more!
